

While there are various oxygen-infused products on the market, they all originate from a gaseous state. Ox66™ is the only solid form of oxygen that allows for consuming and combining in various delivery systems.

Taken orally, Ox66™ provides oxygen to the body via the circulatory system, effectively energizing sluggish systems. Applied topically, Ox66™ accelerates healing in wounds, burns, bruises and other skin conditions by providing lost oxygen to wounded issues and cells, reducing the incidence of infection and triggering natural healing responses.

Our manufacturer has infused Ox66™ into our Sugar Free and Regular Gummies, nanosized to <10 microns, ensuring the most effective bioavailability and providing the body with additional energy.

With over 10 years of testing and research, Ox66™ has so far received 16 Patents across the globe, reinforcing its potential as a revolutionary new therapeutic. This extensive testing has demonstrated Ox66™'s ability to radically improve our health and way of life, enabling one of the most significant therapeutic product breakthroughs of our lifetime.

Clearly Ox66™'s ability to provide oxygen makes it of extreme benefit for any insult to the human body resulting in low oxygen levels in cells and tissues.

CBG

CBG (Cannabigerol) is a non-psychoactive cannabinoid that helps make CBD, however the two cannabinoids are made from different compounds within the cannabis plant although with completely different chemical structures. CBG is the precursor from which all other cannabinoids are synthesized, which is why it's often referred to as the "mother" or "stem cell" of cannabinoids.

CBG works by interacting with the endocannabinoid system (ECS). Together, CB1 and CB2 receptors regulate neurohormones which actively affect physiological processes including mood, metabolism, and pain response.

CBN

CBN (cannabinol) is among the 100+ molecules in the cannabis plant. CBN comes from oxidation and decomposition of the THC, meaning that when THC is heated and exposed to CO2 (oxygen), it converts to CBN. The compound is said to have a mild psychoactive effect slightly more so than CBD but much less than THC. Specifically, it is said to have a sedating effect on most users and to have promising sleep aid applications, similar to melatonin.

Our manufacturer uses their proprietary cutting-edge Nano technology. The bioavailability of each molecule is enhanced through the Nano emulsification process using ultra-purification water, allowing the CBG/CBN to bypass normal oil digestive processes and enter immediately into the bloodstream, providing a fast-acting delivery.

The CBG/CBN used in our Gummies and topicals contains zero THC so it falls within the standards for Hemp outlined in the 2019 Farm Bill. You will also find a 3rd Party Certificate of Analysis (COA) on each batch of any of our CBG and CBN used in our products confirming its purity and confirming it's free of any insecticides, pesticides or contaminants.

*Our Ox66™, CBG and CBN uses our Nano-Technology and ultra-purification water to provide maximum cellular bioavailability.
